The global Claddings market was valued at 19315.24 Million USD in 2021 and will grow with a CAGR of 3.89% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Cladding systems provide versatile long lasting energy saving advantages, which are designed to meet the most demanding aesthetic and functional requirements. The choice of cladding is done based on a careful assessment and prioritization of each of these roles for each orientation of the building. By choosing cladding materials specific to an elevation or exposure, users can achieve the best in physical performance and aesthetics. Cladding is typically made from wood, metal, plastic (vinyl), masonry or an increasing range of composite materials. The claddings market is largely driven by the rise in residential & commercial constructions, government regulations regarding zero energy buildings, and an increasing demand for sustainable cladding systems. However, the claddings market growth is restrained due to factors such as high material & installation costs and lack of skilled labor availability.
