## Abstracts

The global Clean Room Fan Filter Unit market was valued at 4.09 Million USD in 2021 and will grow with a CAGR of 2.96% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A Clean Room fan filter unit (FFU) is a type of motorized air filtering equipment. It is used to supply purified air to cleanrooms, laboratories, medical facilities or microenvironments by removing harmful airborne particles from recirculating air. The units are installed within the system's ceiling or floor grid. Large cleanrooms require a proportionally large number of FFUs, which in some cases may range from several hundred to several thousand. Units often contain their own pre-filter, HEPA filter and internally controllable fan air distribution. This industry is highly fragmented. Most companies are small except for a few large companies. These small businesses have different levels of technical management and production management. Especially in China, many small companies blindly imitate the products of large enterprises. In the competition, these companies often occupy the market by low prices. Fan Filter Unit industry concentration is too low, which can only rely on increasing the supervision of product quality and relying on the continuous purification of the market to gradually solve. With the continuous development of key enterprises in the industry, some small enterprises will gradually withdraw from the Fan Filter Unit market. Of the major players of Fan Filter Unit, American Air Filter Company, Inc. maintained its first place in the

ranking in 2017, followed by Pentagon Technologies and Nicotra Gebhardt S.p.A.. In this study, the market for Fan Filter Unit consumption divided into seven geographic regions including North America, Europe, China, Korea, Japan and Southeast Asia. Among all regions, China is estimated to represent the highest share. In terms of value, China is forecast to grow at a faster pace versus other regions during the forecast period, driven by use of the fan filter unit in the Semiconductor & Optical Industry applications. The North America and Europe region, pushed initially by the Life Science application and is forecast to maintain the pace of growth. The Japan, South Korea and Southeast Asia driven by its use of fan filter unit in the Semiconductor industry, is forecast for slightly faster growth than the North America.
