Mass spectrometry is an analytic technique with high specificity and a growing presence in laboratory medicine. Various types of mass spectrometers are being used in an increasing number of clinical laboratories around the world, and, as a result, significant improvements in assay performance are occurring rapidly in areas such as toxicology, endocrinology, and biochemical genetics. Clinical mass spectrometry uses the mass spectrometry technology for diagnostic purposes. Employed by medical labs, clinical mass spectrometry is used to diagnose metabolism deficiencies, to determine whether biomarkers or enzymes are present, and for toxicology testing. The global production of the Clinical Mass Spectrometry is about 1931 units, North America is the largest production region, and the North America occupies about 63% of the market share. The second largest region is Europe, the region occupies about 25% market share, the Asia has little production, it only occupies about 10% market share in 2015. The largest company is Thermo Fisher, it occupies more than 26% of the market share, and the second largest company is AB Sciex (Danaher).
