### Abstracts

The global Clofentezine market was valued at .98 Million USD in 2021 and will grow with a CAGR of 3.45% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Clofentezine is a pure red crystal chemical substance, formula C<sub>14</sub>H<sub>8</sub>CL<sub>2</sub>N<sub>4</sub>. One kind of tetrazine acaricides, embryo development inhibitors, mainly kill lice eggs, also have a certain effect on pups, and are not effective for adult lice. Clofentezine is a very small kind of acaricide, which can only play a significant role in maggot eggs, thus limiting its use. On the other hand, it is easy to produce drug resistance. Downstream customers are used with other acaricides generally. It has many alternatives. Therefore, the demand is unstable. At present, China and Israel are the main producing areas. However, with the tightening of China's environmental protection policy, a large number of manufacturers have been forced to shut down the production line due to environmental pressure and have withdrawn from the industry. Such as Hebei Lv Feng Chemical. It is expected that this situation will not be improved in the future. On the other hand, raw material prices have risen sharply, causing the price of this product to increase in the second half of 2017, especially in the second half of the year. For the above two reasons, we expect that prices will remain high in 2018. Since the main target of clofentezine is fruit trees, apples and pears are the main consumers. Therefore, the consumption area of clofentezine is the main producing area of apple

and pear. Therefore, regional consumption is obviously regional. And the market changes little. Cause the market to be fixed, even a bit rigid. At present, the market has a relatively better effect as a fluazinate. As a new type of acaricide, it has the advantages of residual place and good effect, but it is expensive, so we believe that in the next few years, this product will still be a lot of Used, but as the competition continues to mature. His pressure will gradually increase.
