Abstracts

The global Closed Impeller Pump market was valued at 1647.57 Million USD in 2021 and will grow with a CAGR of 2.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Closed impellers have a back and front wall around the vanes, to increase strength. Closed impellers are used primarily in larger pumps and can be used in applications that handle suspended-solid service. At present, the closed impeller pump industry is dispersive relatively. The world large manufacturers are mainly concentrated in USA and Europe. Meanwhile, they have more advanced equipment, strong R & D capability, and the technical level is in a leading position. Despite the presence of competition, due to the global development trend, investors are still optimistic about this area. In future more investment will enter into the field. Technology and cost are two major challenges they must face. Although sales of closed impeller pump brought a lot of opportunities, for the new entrants with only advantage in capital without sufficient support in technology and downstream channels, the research group did not recommend taking risk to enter this market.
