Abstracts

The global Cloud Infrastructure market was valued at 15802.39 Million USD in 2021 and will grow with a CAGR of 7.41% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Cloud Infrastructure refers to online services that provide high-level APIs used to dereference various low-level details of underlying network infrastructure like physical computing resources, location, data partitioning, scaling, security, backup etc. A hypervisor, such as Xen, Oracle VirtualBox, Oracle VM, KVM, VMware ESX/ESXi, or Hyper-V, LXD, runs the virtual machines as guests. Pools of hypervisors within the cloud operational system can support large numbers of virtual machines and the ability to scale services up and down according to customers` varying requirements. Several healthcare organizations are progressively automating their IT infrastructure to unify the complex IT infrastructures by combining storage, applications, network, and data. Having their IT infrastructure automated, it simplifies healthcare organizations` patient care and facility management data, which help to optimize the flow of information between the facilities` equipment, medical systems, and applications. The automation of healthcare organizations` IT infrastructure can help in simplify command and control through their own protocol and reduce the facilities` overall cost of operation.
