A CMOS Camera Module (CCM) is a device that converts an optical image into electronic video signals. These electronic signals are then converted into digital data on the display of a digital imaging device for users to store as a digital image. The booming demand for mobile phone, smartphones, multimedia tablets and other mobile devices has driven the demand for camera modules, which are the core components for built-in digital cameras and have become one of the key differentiating factors for such devices. The CMOS camera module is comprised of a complex integration of optical, electronic, and mechanical technologies. LG Innotek, SEMCO, Sharp and LITEON captured the top four revenue share spots in the CMOS Camera Module market in 2015. LG Innotek dominated with 16.54 percent revenue share, followed by SEMCO with 14.41 percent revenue share and Sharp with 7.22 percent revenue share.
