CNC router is a computer controlled cutting machine related to the hand held router used for cutting various hard materials, such as wood, composites, aluminum, steel, plastics, and foams. CNC stands for computer numerical control. CNC routers can perform the tasks of many carpentry shop machines such as the panel saw, the spindle molder, and the boring machine.CNC Router product demand market there is also a certain space, but basically showing the scarcity of high-end products, and low-end products, excess capacity. Along with the development of Chinese domestic CNC Router, Chinese domestic CNC Router has been very mature and advanced, and the performance distance has been shortening compared with the imported CNC Router. Although sales of CNC Router brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the CNC Router field. As large demand of high-end products at home and abroad, many companies began to enter the field of high-end. Currently, the Chinese CNC Router industry is not only begin to transit to high-end CNC Router products, while still extend in the resource-rich land and downstream industry chain.
