A coagulation analyzer or a micro-coagulation system is a device that measures and evaluates the speed of clot formation or blood coagulation. It helps to avoid the chances of heart attack, thrombosis, and embolism by detecting the presence of blood clots in the blood vessels. This analyzer is used to measure a coagulation pathway speed as well as thrombin & thromboplastin levels in a few minutes. It works on the principle of optical detection method by detecting turbidity during coagulation of the blood causing change in the intensity of light that it scattered.
