## Abstracts

The global Coating Equipment market was valued at 134.87 Million USD in 2021 and will grow with a CAGR of 5.19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Powder coating equipment is generally used to coat metal surfaces. Equipment used to apply powder coating is dependent on the shape of the object, size of the object, and other parameters. The commonly used process for applying powder coating to metal surfaces is spraying powder coating by corona or tribo guns. The coated object is then cured in oven so as to form a uniform film of coatings. Various industries have started using powder coatings as they are free from volatile organic components. Moreover, increasing concerns about environment conservation and use of environment-friendly products are expected to fuel the demand for the powder coatings, thereby leading towards the growth of the powder coating equipment segment of the coating equipment market. Major end-use industries of coating equipment are automotive, industrial, and aerospace. In 2017, the industrial segment accounted for the largest share of the coating equipment market, owing to increased use of industrial coatings in heavy machinery as well as chemical and manufacturing industries. The specialty coatings applied by specialty coating equipment are long-lasting, uniform, and offer required finish. Increasing demand for industrial coatings from different end-use industries is expected to drive the growth of the industrial segment of the coating equipment market

during the forecast period.
