Abstracts

The global Cocamine Oxide market was valued at 227.7 Million USD in 2021 and will grow with a CAGR of 3.39% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Cocamine Oxide is a tertiary amine oxide; it is colorless to pale yellow viscous liquid. It is as foam booster and stabilizer used in cosmetic industry. They are used as nonionic surfactants impart excellent viscosity enhancing and foam stabilization in anionic based systems like hand washing liquids, shampoos, body washes and other personal care products. They act as lubricant agent, thickening agent and wetting agent. The Cocamine Oxide industry concentration is not very high; there are many manufacturers in the world, and high-end products mainly from Japan, Americas and Europe. In the world wide, giant manufactures mainly distribute in Americas and China such as Solvay, Kao Chemicals, Stepan Company and Clariant. Due to the wide downstream consumption of the Cocamine Oxide, it should have large production share in daily chemical products, it has many substitute goods and the production of cocamine oxide is not very large. There are a few companies with several plants. Recent years, there are some companies starting to research and development the product. The industry will form a much high concentration of global market competition in future. At present, the top five companies account for about 40% of global market share in Cocamine Oxide field. After decades of development, the giant manufacturers have proven

technique. The Cocamine Oxide industry in China developed in about 1990s but the technology level of this product is not high. The technological level of Cocamine Oxide in China has a big gap compared with the international advanced level. Outstanding performance in product application performance is not outstanding, function is not strong, supporting enough, clean low level, product updates slow, long development cycle. There is little Cocamine Oxide performance in China at or near the international advanced level. The global production and capacity of Cocamine Oxide are fluctuant in a small range in the past five years; the capacity is from about 93000 to 114000 MT while the production is from 77000 to 94000 MT. It is expected that it will increasing in future.
