A cochlear implant is a small, complex electronic device that can help to provide a sense of sound to a person who is profoundly deaf or severely hard-of-hearing. The implant consists of an external portion that sits behind the ear and a second portion that is surgically placed under the skin. Cochlear implant raw material specifications are very high. Its technologies are extremely demanding. The technical barriers of cochlear implant industry is very high, only a handful of countries to master the technique. The world market has been monopolized by Cochlear, MED-EL and Advanced Bionics (Sonova). Some Chinese mastered the technique, but does not participate in international competition.
