Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Coconut water, less commonly coconut juice, is the clear liquid inside coconuts (fruits of the coconut palm). In early development, it serves as a suspension for the endosperm of the coconut during the nuclear phase of development. As growth continues, the endosperm matures into its cellular phase and deposits into the rind of the coconut pulp. The liquid inside young coconuts is often preferred to the liquid of a ripened coconut. Coconut water is one of the fastest growing beverage categories in the Western Europe, the United States and Brazil due to its natural hydrating qualities, great taste and nutritional benefits, not to mention the large number of celebrities drinking it. It is a great source of nutrients, contains calcium and magnesium, and the same amount of heart healthy potassium as a banana or a glass of orange juice. And that's just a few of its 'superdrink' claims. With a mass appeal to ethical and health conscious consumers and those leading an activity lifestyle, and some are predicting it could overtake the sales of orange juice (as has already happened in Brazil).
