## Abstracts

The global Coil Wound Devices market was valued at 1695.42 Million USD in 2021 and will grow with a CAGR of 2.86% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Increasing per capita consumption in emerging countries has led to an increasing demand for efficient coil wound devices for various industries such as automotive, food and beverages, pharmaceuticals, and agriculture, among others. This, in turn, has increased the shipment of electronic devices, and appliances which in turn has been a driving factor for the global coil wound devices market. Moreover, increasing adoption of coil wound devices in the automotive sector is anticipated to fuel the demand in near future. Advancement and replacement of aging power infrastructure in the U.S. is one of the key factors driving the coil wound devices demand in North America. The aging electricity infrastructure will require new technologies to enable better failure detection. Traditional systems do not meet many emerging trends, such as growing penetration of distributed generation resources and need for greater resilience. The new transmission technologies combine power electronic devices with capacitors and inductors to provide a range of controlling capabilities for transmission and distribution systems. The demand for coil wound devices, especially transformers, is anticipated to witness a notable growth as they are important components that are used for carrying out electric grid transition from traditional designs to the designs of future in the coming years.
