Coke is a grey, hard, and porous fuel with a high carbon content and few impurities, made by heating coal or oil in the absence of air?a destructive distillation process. It is an important industrial product, used mainly in iron ore smelting, but also as a fuel in stoves and forges when air pollution is a concern.The Coke industry is held by China, India and Japanese companies. China became the biggest producer and exporter of coke many years ago. China has the world`s largest steel output. As a result, China has become the world`s largest consumer-from steel market. China has the world`s largest coke production capacity, with more than a thousand manufacturers, so the industry concentration cumulatively low. The scale of independent coking manufacturers is very small; their production capacity is usually below 2 million tons. Compared with coking coal and steel companies, coking companies have lower bargaining power.

ArcelorMittal, Nippon Steel & Sumitomo Metal, China Baowu Group, POSCO and China Pingmei Shenma Group are the largest 5 players in the market, with a combined market share of 14.75% in 2019 in terms of revenue.
