Cold rolling is used to further treat hot rolled steel sheet to increase its strength and its strength-to-weight ratio and enable it to hold tighter tolerances during fabricating and machining. In addition, cold rolling is used to smooth and finish the surface of hot rolled steel. The processes used to improve the surface finish and to size the cold rolled sheet more precisely include chemical or mechanical descaling and cold rolling or polishing. It also increases its strength and hardness because it is performed at room temperature and below the recrystallization temperature. For regions, Asia, especially China, is the largest production and consumption region, followed by Europe and US. Japan and Korea also play important role in the market, large quantity of Cold rolled silicon steel is exported to the world every year. This situation will not change in the short term. The production of cold rolled silicon steel, shows a high concentration, moreover and the core technology of production process held in several giant companies.
