The global Cold Rolled Steel Coil market was valued at 13141.91 Million USD in 2021 and will grow with a CAGR of 2.38% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Cold rolling is used to further treat hot rolled steel sheet to increase its strength and its strength-to-weight ratio and enable it to hold tighter tolerances during fabricating and machining. In addition, cold rolling is used to smooth and finish the surface of hot rolled steel. The processes used to improve the surface finish and to size the cold rolled sheet more precisely include chemical or mechanical descaling and cold rolling or polishing. It also increases its strength and hardness because it is performed at room temperature and below the recrystallization temperature. The cold-rolled coil prices have seen a significant increase from 2016 to 2017 since it suffered a continuous decline in the 2014-2016 period. In 2017, the cold-rolled coil average price is 744.0 USD per tonne globally and will keep increasing as a result of rising raw material costs.
