## Abstracts

The global Commercial Greenhouse market was valued at 209.95 Million USD in 2021 and will grow with a CAGR of 4.84% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Greenhouses are places for growing plants in a controlled environment. Europe has traditionally been at the forefront of implementing advanced techniques in the commercial greenhouse market. Countries such as The Netherlands, Spain, and France have large areas under greenhouse cultivation. The increasing population and demand for food in developing regions such as Asia-Pacific are boosting the growth of this market. The increasing trend of rooftop farming and the rising population are the two major drivers for the market. However, the high cost of commercial greenhouses, especially technologies such as LED grow light and HVAC systems, is a restraint for the commercial greenhouse market. Temperature is one of the most important parameters for plant photosynthesis. Due to this, a commercial greenhouse needs to be equipped with technologies for maintaining the ideal temperature required for photosynthesis. Thus, heating and cooling systems together constituted nearly 51% of the overall commercial greenhouse market in 2014. However, they are far more superior to the conventional greenhouses or traditional farming in terms of providing the desired light spectrum at all stages of plant growth, are energy-efficient, and offer longer operating life. These features are encouraging growers to adopt LED grow lights.
