Soft serve is a type of ice cream that is softer than regular ice creams as a result of air being introduced during freezing. Soft Serve Freezer is used to make Soft Serve Ice cream. Soft Serve Freezer may prepare the mixture by employing the hand-cranking method or by employing an electric motor. The resulting preparation is often chilled through either pre-cooling the machine or by employing a machine that freezes the mixture. A Soft Serve Freezer has to simultaneously freeze the mixture while churning it so as to aerate the mixture and avoid ice crystals. As a result, most ice creams are ready to consume immediately. However, those containing alcohol must often be chilled further to attain a firm consistency. Some machines, such as certain lower-priced countertop models, do require that the resulting mixture be frozen for additional time after churning is complete. The Worldwide Soft Serve Freezer market is well diversified across USA, APAC, Europe and Other region. USA has the highest market share and dominates the Soft Serve Freezer market, and China is the next big market following USA. The growth of Soft Serve Freezer business is expected to grow at a moderate pace. Countries such as the Italy, France and UK, which are the leading countries in this region, are likely to register a positive growth.
