Composite cans are cylindrical paper tube that usually has a body made of several layers of Kraft paper wounded by spiral, convolute and linear draw winding method. Spiral Wound Cans are made by diagonally winding and gluing four layers of material together. The bottom layer is usually tin or foil, the two middle layers are usually paper board, and they serve to give the can its structure. Composite Cans are used mainly for packaging everyday household items like coffee whiteners, diet drinks, bread crumbs, hot chocolate mixes, nuts, cakes, spices, tea, cleaning gels and baking sodas among others. Composite Cans offer several advantages such as cost-effectiveness, environmental safety (composite cans are mostly made from recycled products), durability, versatility and user friendliness in general.
