The global Composite Rebar market was valued at 476.23 Million USD in 2021 and will grow with a CAGR of 9.58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Composite rebar is used in the construction and repair of bridges-automobile, railway, pedestrian, combined. It replaced the metal products, as it has the following characteristics: increased wear resistance; resistance before exposure to corrosive environment, including seawater; resistance to corrosion under high humidity conditions; minimum weight, which is important when working with large bridges. Composite rebar has many types, which include GFRP rebar, CFRP rebar, BFRP rebar and others. And each type has application industries relatively. With corrosion resistance and high strength of composite rebar, the downstream application industries will need more composite rebar products. So, composite rebar has a huge market potential in the future.
