The global Compound Feed market was valued at 40842.34 Million USD in 2021 and will grow with a CAGR of 2.49% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Compound feed is a complete feed which plays an important role in the growth and performance of the animals. This increasing awareness about the benefits of providing compound feed instead of only forage or silage feed among growers fuels the demand for compound feed. The shift in dietary preferences toward a protein-rich diet, owing to health awareness and a rise in income levels among the population, drives the consumption of meat and other animal-based products. On the basis of ingredients, the supplements segment is projected to be the fastest-growing during the forecast period. The poultry segment is estimated to dominate the compound feed market on the basis of livestock through the forecast period. By form, the pellets segment dominated the market in 2017. On the basis of source, the plant-based segment accounted for the largest share of the compound feed market in 2017.
