The global Compressed Natural Gas market was valued at 156.74 Million USD in 2021 and will grow with a CAGR of 13.96% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Compressed natural gas (CNG) (methane stored at high pressure) is a fuel which can be used in place of gasoline, diesel fuel and propane/LPG. CNG combustion produces fewer undesirable gases than the fuels mentioned above. It is safer than other fuels in the event of a spill, because natural gas is lighter than air and disperses quickly when released. Biomethane - cleaned up biogas from anaerobic digestion or landfills - can be used. In recent years, the share of natural gas in the global energy mix has drastically increased. The compressed natural gas (CNG) is used widely in heavy duty transportation vehicles due to affordability and eco-friendliness. With the rise in the environmental issues such as climatic changes and depleting ozone layer many nations across the globe have started using CNG in power production.
