Concentrating photovoltaic (CPV) refers to the technology that converts concentrated sunlight directly into electricity through high conversion efficiency photovoltaic cells. CPV is the most typical representative of concentrating solar power generation technology. The crystalline silicon cells and thin-film batteries for photoelectric conversion are the first and second generation of solar energy utilization technology respectively. The use of concentrating solar energy technology that utilizes optical elements to collect sunlight and use it to generate electricity is considered to be the third generation of solar power generation. First of all, the increasing demand for Concentrator Photovoltaic market is caused by high efficiency of CPV, government support and demand of electricity. For example, CPV can increase conversion rate of light into electricity and reduce the cost of generation. Additionally, which may not pose a threat to environment. Second, the global market for Concentrator Photovoltaic is segmented into some regions. China dominates the Concentrator Photovoltaic market because of the rapid population growth.
