The global Concrete Bonding Agent market was valued at 2633.38 Million USD in 2021 and will grow with a CAGR of 4.76% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Concrete bonding agent is a material formulated for bonding new concrete/plaster with an old one. It needs to be applied onto the pre-existing concrete to ensure successful adherence of the fresh concrete over it. This is required because cement within a concrete mix is without any natural bonding agents. Thus, when a fresh concrete is added on an old mature layer of concrete, the two won't join together and act as separate layers until concrete bonding agent is added between them. The main use of this material is in repairing, flooring, decorative applications, and others.
