Concrete joints are used to compensate when concrete expands or shrinks with changes in temperature. Concrete joints are normally used to prevent cracks when the concrete shrinks by creating forming, tooling, sawing and placing joint formers. The pre-planned cracks will provide a better finish concrete product and will be formed in specific locations where those cracks could be monitored. Sometimes because of the material and width or span of the concrete joints are required to improve the performance of the material and allow the materials to expand/contract or move without damaging other structures. The market of Concrete Expansion Joint Fillers is relatively fragmented. The world leading vendors are GCP Applied Technologies, Watson Bowman Acme, EMSEAL Joint Systems, MM Systems, W. R. Meadows, LymTal International, DS Brown, ITW Construction Systems, Nystrom, RJ Watson, Connolly Key Joint, Amorim, WE Cork, Megacork, Roaby and ZKHY.
