Concrete joints are used to compensate when concrete expands or shrinks with changes in temperature. Concrete joints are normally used to prevent cracks when the concrete shrinks by creating forming, tooling, sawing and placing joint formers. The pre-planned cracks will provide a better finish concrete product and will be formed in specific locations where those cracks could be monitored. Sometimes because of the material and width or span of the concrete joints are required to improve the performance of the material and allow the materials to expand/contract or move without damaging other structures. The market of Concrete Expansion Joint is relatively fragmented. The world leading vendors in the market are Roaby, which accounted the sales market share of 8.78% in 2017, followed by GCP Applied Technologies, Watson Bowman Acme, MM Systems, LymTal International, DS Brown, EMSEAL Joint Systems, Nystrom, ITW Construction Systems, RJ Watson, Connolly Key Joint and ZKHY. Globally, 16697.6 K meters Concrete Expansion Joint have been put into the market in the year 2017, while China attributes close to 29.93% of the world sales, North America close to 22.12%, and Europe 18.68%. In terms of consumption, China is the largest market because of the fast demand of building and infrastructure
