Conductive adhesive (also known as electrically conductive adhesive) is a glue that is primarily used for electronics. The conductive component can be silver, copper or graphite. Other conductive materials are possible but unusual. The sticky component can be a varnish (of one component) or a synthetic resin (of one or two components).As Chinese overall economic downward trend in the past few years, and international economic situation are complicated, in the next few years there will be many uncertainties. Currently in the domestic market, some highly sophisticated areas of conductive adhesive used are mainly dominated by imports: TeamChem Company, Ablistick Company, 3M Company occupied the most IC and LED market, Sumitomo and Taiwan Yihua are also involved in these fields. Japan Three-Bond Company controls the entire quartz crystal resonator conductive adhesive. Domestic conductive adhesive is mainly used in some low-end products; this market is mainly occupied by the Shanghai Research Institute of Synthetic Resins.
