Conductive ink is an ink that results in a printed object which conducts electricity. It is typically created by infusing graphite or other conductive materials into ink. The conductive inks market is classified based on application, namely, photovoltaic, membrane switches, displays, automotive, sensors, RFID, and printed circuits. The market is dominated by the photovoltaic segment mainly due to increased application in solar panels for renewable energy. On the other hand, application of conductive inks in membrane switches, displays, and automotive circuits is also expected to drive the market during the forecast period. The RFID segment is projected to register the highest growth rate, in terms of value, between 2017 and 2022.
