The global Conductive Silicone market was valued at 3253.71 Million USD in 2021 and will grow with a CAGR of 4.13% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Silicone elastomers are projected to be the most-dominant type of conductive silicones between 2016 and 2021. Silicone elastomers are of great importance due to their extraordinary characteristics such as electric properties, mechanical strength, shock resistance, moisture resistance, excellent adhesion properties, and aging and chemical resistance. Silicone elastomer are further segmented as HTV (High temperature vulcanize), LSR (Liquid silicone rubber), and RTV (Room temperature vulcanize) and are preferably used in the electronics & electrical industry. Owing to its high electrical & thermal conductivity, flexibility and high mechanical strength, silicone elastomers are rapidly growing in the conductive silicon market. Conductive Silicone is a molded silicone filled with conductive inert particles. It provides high electrical conductivity, broadband shielding and moisture sealing. Conductive Silicone are manufactured in sheets, extrusions, strips and custom molded parts.
