Abstracts

The global Confocal Raman Spectroscopy market was valued at 244.2 Million USD in 2021 and will grow with a CAGR of 7.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Confocal Raman Microscopy/Spectroscopy (CRM) brings together confocal imaging and Raman spectroscopy to provide capabilities not available to either Fourier transform infrared (FTIR) spectroscopy or the scanning electron microscope (SEM). CRM's high resolution also fills a dimensional measurement gap between those two techniques. The confocal imaging system provides a spectral image with consistent resolution of 200 nanometers, and in many cases it can provide useful data at the 100 nanometer level.
