## Abstracts

The global Connected Ceiling Fans market was valued at 536.01 Million USD in 2021 and will grow with a CAGR of 5.58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A ceiling fan is a mechanical fan, usually electrically powered, suspended from the ceiling of a room that uses hub-mounted rotating paddles to circulate air. A ceiling fan rotates much more slowly than an electric desk fan; it cools people effectively by introducing slow movement into the otherwise still, hot air of a room, inducing evaporative cooling. Fans never actually cool air, unlike air-conditioning equipment, but use significantly less power (cooling air is thermodynamically expensive). Conversely, a ceiling fan can also be used to reduce the stratification of warm air in a room by forcing it down to affect both occupants' sensations and thermostat readings, thereby improving climate control energy efficiency. Smart Connected Ceiling Fans can be remotely controlled and can be programmed to switch on depending on the preset temperatures and schedules. Global Connected Ceiling Fans key players include Big Ass Fans, Panasonic, Hunter Fan, etc. Global top 3 manufacturers hold a share over 42%. North America is the largest market, with a share about 37%, followed by Europe, and Asia Pacific, both have a share about 55 percent. In terms of product, 50-54 inches is the largest segment, with a share over 38%. And in terms of application, the largest application is Residential Use, followed by Commercial Use.
