Connected vending machine is a machine that dispenses items such as snacks, beverages, alcohol, cigarettes, lottery tickets to customers automatically, after the customer inserts currency or credit into the machine. The first modern vending machines were developed in England in the early 20th century and dispensed postcards.Connected vending machine is the contactless payment-enabled vending machines that support both online payment and site payment. It can also calculate the amount of the sold products and send messages automatically when the products are going to be sold out. The first solutions for including connectivity in vending machines became commercially available already two decades ago. It has still taken years for the technology to gain the interest of mainstream vending operators. The market has nevertheless gained momentum in recent years as more and more vending operators have started to deploy cashless payment systems and vending telemetry solutions at a larger scale. Demand for cashless payments is currently the main market driver. However, vending telemetry is forecasted to have a more transformational effect on the industry in the future as these solutions enable vending operators to substantially improve their operational efficiency.
