The global Constant Velocity Universal Joint market was valued at 7416.83 Million USD in 2021 and will grow with a CAGR of 1.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Constant-velocity joints (CV joints) allow a drive shaft to transmit power through a variable angle, at constant rotational speed, without an appreciable increase in friction or play. They are mainly used in front wheel drive vehicles, and many modern rear wheel drive cars with independent rear suspension typically use CV joints at the ends of the rear axle halfshafts and increasingly use them on the propshafts (drive shafts). In the next years, the growth rate of automotive production may decrease in Europe and US, but the enormous automotive population will provide large market demand. In China, the growth rate of automotive production will still be higher than other regions. The situation of automotive constant velocity universal joint industry will be the same.
