The global Continuous Passive Motion Devices market was valued at 597.88 Million USD in 2021 and will grow with a CAGR of 3.7% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Continuous passive motion devices are used to ensure proper motion of limb, particularly, of the leg or arm. Continuous passive motion devices are used in the first stage of rehabilitation following the traumas and soft tissue medical procedure. These devices aims at continuous and repeated motion of joints in a structured range of motion. Continuous passive motion devices are in great demand owing to their wide range of applications in various medical fields involving children, bariatric patients and for reconstruction from joint surgery as in the anterior cruciate ligament ACL reconstruction and knee replacement. The increasing cases of traumas and joint replacement and the need to rehabilitate them all over the globe are facilitating the market for continuous passive motion devices. These devices improve long term functions, knee extensions in short or long term and also long term knee flexion. For the treatment of standard mobilization, continuous passive motion devices are useful. The daily treatment increases the mobility of affected joint. The continuous passive motion devices ensures safe exercise throughout the repair phase and healing of the distressed tissue and minimizes the postoperative pain with reduced chances of inflammation. The global market for continuous passive motion devices is anticipated to

be driven by the increasing prevalence of diseases associated with joint replacement, trauma or ligament reconstruction and also with increasing number of aging population. The growing concerns relating to health problems and the necessity to cure them is projected to drive the market in the forecast period. However, the critical reimbursement scenarios and the cost of the treatment are the factors that restrain the growth of continuous passive motion device market over the globe. The reliability, safe implication of the devices and wide range of medical application of continuous passive motion devices are the key drivers of the market.
