Abstracts

The global Contrast Injector Systems market was valued at 62.44 Million USD in 2021 and will grow with a CAGR of 7.95% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Contrast injector systems are medical devices that use contrast media to enhance the visibility of complex body structures such as body fluids, tissues, arteries, and veins. The diagnosis is conducted with the help of many imaging procedures such as computed tomography (CT), magnetic resonance imaging (MRI), and angiography. The rise in geriatric population coupled with rapid rise in chronic diseases as well as the demand for early and minimal-invasive diagnosis are the key factors that drive the growth of the contrast injector systems market. However, the high cost of contrast injector systems and the risks associated with the use of contrast media in the injector system is projected to impede the market growth. Moreover, the increase in healthcare expenditure and the emergence of complex diseases in emerging economies are expected to create lucrative opportunities for key market players.
