Contrast Medium (or contrast agents) is a substance used to increase the contrast of structures or fluids within the body in medical imaging. Contrast agents absorb or alter external electromagnetism or ultrasound, which is different from radiopharmaceuticals, which emit radiation themselves. Contrast Medium enhance the radiodensity in a target tissue or structure. Contrast agents are commonly used to improve the visibility of blood vessels and the gastrointestinal tract. Several types of Contrast Medium are in use in medical imaging and they can roughly be classified based on the imaging modalities where they are used. Most common contrast agents work based on X-ray attenuation and magnetic resonance signal enhancement. In the report, one unit refers to 1 ml, 1 pills or 1 bag. North America is the largest consumption place, with a consumption market share nearly 32% in 2017. Following North America, Europe is the second largest consumption place with the consumption market share of 28%. Market competition is intense.
