Conveyor systems are mechanically-operated material handling equipment, which are used to transport material within premises. They provide a quick and effective transportation solution with a high degree of safety. Therefore, due to effectiveness of conveyance, a considerable amount of cycle time is reduced in the industrial process. The same factor helps in reducing the errors in handling manual material. Early commercialization of the conveyor system took place for transportation of heavy materials in the industrial sector. Currently, there are many producing companies in the world Conveyor Systems industry, especially in North America, Europe and Asia regions.
