In electric power distribution, a copper busbar (also bus bar, and sometimes misspelled as buss bar or bussbar) is a copper strip or bar, typically housed inside switchgear, panel boards, and busway enclosures for local high current power distribution. The demand for copper busbars and profiles comes primarily from transformers and switchgear equipment that are used in the infrastructure industry. The electrical and power equipment sector requires copper busbars and profiles in power generation stations to connect the generator to step-up transformers and the transformers to switchgear. These busbars are predominantly consumed in transmission, power generation, and distribution equipment.
