Chromated copper arsenic (CCA), is a waterborne wood preservative introduced into wood by pressure impregnation. The active ingredients are chromium (47.5%), arsenic (34.0%) and copper (18.5%). The extraordinary effectiveness of CCA as a wood preservative lies in the combined action of these three elements. Copper, acts as a fungicide; arsenate, a form of arsenic, is an insecticide; and chromium, binds the ingredients to the wood.CCA is one of the world`s most popular wood preservatives, in use for more than 75 years. As a water-borne preservative, it offers timber long-term protection against attack by wood-destroying fungi, insect larvae and termites. It is applied by impregnation into the timber by vacuum pressure at a timber treatment plant. CCA can be used for hazard classes H1 to H5.
