The global Copper Heat Sink market was valued at 1229.34 Million USD in 2021 and will grow with a CAGR of 3.7% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Copper heat sink is necessary due to the greater level of thermal conductivity one can achieve with it. In fact, copper conducts two times the amount of thermal energy as aluminum, making it an extremely desirable substance for heatsink production. Copper is able to be refined as a heatsink, put through die-casting and even bound together in the form of plates. There are two heat sink types: active and passive. Active Heat Sinks are those that have some kind of air mover on them. This might be a fan or blower, and generally it is attached in some way to the heat sink. The air move provides local air helping to cool down a semiconductors hot spot. Many active heat sinks are often seen cooling high end graphics processors (GPUs) on graphics boards. The performance of this kind of heat sink is high.China lead the global market for Copper Heat Sink during the forecast period, due to the rapid growth of the demand market in China. This region accounts for a market share of nearly 43.9 % in 2017 and is followed by the North America and Europe.
