The global Copper Nano Powder market was valued at 10.48 Million USD in 2021 and will grow with a CAGR of 11.85% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Copper Nano Powder is a copper-based particle 1 to 100 nm in size. Nano-copper is a purple-brown or purple-black powder. The copper atoms in nano-copper are the same as those in ordinary copper, but the nano-copper particles are very small, and the chemical properties are more active than ordinary copper. Nano copper has excellent characteristics such as large specific surface area, strong adsorption capacity and high surface activity. Copper nano powder is referring to the small copper particle size ranged from 10^{-9} to 10^{-7} m. Globally, only a few companies can produce nano copper powder commercially. Most companies can only produce products larger than 100nm. It can be widely used in many industries. Survey results showed that 59% of the copper nano powder market is microelectronic device industry, 16.6% is catalyst industry, 18.4% is surface coating materials, With the development of economy, these industries will need more copper nano powder. So, copper nano powder has a huge market potential in the future. Japan is the largest supplier of copper nano powder, with a production market share 35% in 2019. China is the second largest supplier of copper nano powder, enjoying production market share nearly 25.66% in 2019.
