Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

COPPER PASTE is a high temperature anti-seize lubricant. A soft, copper-coloured paste, based on micronized copper powder and synergistic anti-oxidant, anti-corrosion and anti-wear additives suspended in premium grade stable oil. It is an effective anti-seize formulation, preventing metal-to-metal contact, seizing, galling, and fretting corrosion. COPPER PASTE can also be used in power electronics and solar industry with excellent conductive property and low cost. At present, in the foreign industrial developed countries the copper paste industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in the Japan. Meanwhile, foreign companies have more mature equipment, strong R & D capability, and the technical level is also in a leading position. But in foreign companies the manufacturing cost is relatively high, compared with in China. So the manufacturing cost in developed countries is a disadvantage. As the production technology of copper paste manufacturers in China continues to improve, the share of Chinese manufactures will be increasing, and the competitiveness in the international market will also gradually increase.
