The global Copper Products market was valued at 14165.44 Million USD in 2021 and will grow with a CAGR of .67% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Copper is one of the oldest metals ever used and has been one of the important materials in the development of civilization. Because of its properties, singularly or in combination, of high ductility, malleability, and thermal and electrical conductivity, and its resistance to corrosion, copper has become a major industrial metal, ranking third after iron and aluminum in terms of quantities consumed. Copper products include copper plates, copper strips, copper foils, copper tubes, copper rods, copper wires, copper profiles etc. There are many copper products manufactures in the world; the manufactures include Aurubis, Jiangxi Copper, KME Group SpA, Hailiang Group, Wireland, Golden Dragon, Jintian Group, Jinchuan Group etc. Global copper seals will reach about 22.5 million MT in 2015, increase 3.29% compared with last year, the average seals growth rate of copper products is about 3.97% from 2010 to 2015. Copper products seals mainly focus on China and Europe, China copper seals take about 50% market share of global copper products seals in 2015, the followed is Europe, take about 18.2%. Global demand of copper has maintained steady growth; the growth rate is around 3.97%. The uses of copper reflect its variety of material properties: because of its excellent electrical and thermal conductivity, it is ideally suited

for use in electrical engineering, electronics and telecommunications. Its electrical conductivity is 1.5 times as high as that of aluminum, which makes copper the preferred input material for electrical mains. Despite its very good formability, copper is extremely strong with high corrosion resistance. The increasing interconnectedness in our offices and households, growing demands on information and communication technology, a sustainable and environmentally sound energy supply and high safety and comfort standards, for example in automotive engineering, ensure a constant rise in copper demand. Every mid-range car contains about 25 kg of copper-luxury class models can have more than twice this amount. Modern life wouldn't be possible without copper.
