The global Copper Tungsten market was valued at 123.36 Million USD in 2021 and will grow with a CAGR of 5.45% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Copper-tungsten (tungsten-copper, CuW, or WCu) is a mixture of copper and tungsten. As copper and tungsten are not mutually soluble, the material is composed of distinct particles of one metal dispersed in a matrix of the other one. The microstructure is therefore rather a metal matrix composite instead of a true alloy. The material combines the properties of both metals, resulting in a material that is heat-resistant, ablation-resistant, highly thermally and electrically conductive, and easy to machine. China is the largest consumer, who owned nearly 50% share in global consumption market in 2019. The follower is Europe, accounting for about 19% sales share in 2019. In terms of types, WCu 70/30 type occupied the largest sales share of about 37% in 2019. Based on the application, High Voltage Electrical Switch constitutes the largest application market for Copper Tungsten, accounting for about 38% of global share.
