Corrugated Container Board, also referred to as CCM or corrugated case material, is a type of paperboard specially manufactured for the production of corrugated board. The term encompasses both linerboard and corrugating medium (or fluting), the two types of paper that make up corrugated board. Since containerboard is made mainly out of natural unbleached wood fibers, it is generally brown, although its shade may vary depending on the type of wood, pulping process, recycling rate and impurities content. For certain boxes that demand good presentation white bleached pulp or coating is used on the top ply of the linerboard that goes outside the box. Corrugated is a durable, versatile, low and lightweight paper-based material that is frequently used to make boxes, containers, and displays. Over the past few decades Asia Pacific has been the largest consumer and producer of corrugated boards and the trend is likely to continue over the forecast period. This trend is largely attributed to increasing demand for processed food & beverages especially in developing countries including India, China, Malaysia and Indonesia. Booming e-commerce business in Asia Pacific is expected to further augment corrugated board demand over the projected period. Flexibility and light weight properties of corrugated boards provides for easy handling and transportation,

which is a requisite for e-commerce industries. Growing regulations on non-biodegradable materials in North America and Europe is an anticipated driver for corrugated board market over the next six years. Major market expansion is expected in RoW corrugated board market on account of increasing exports of fruits & vegetables from Africa. Regulations on deforestation and use of paper processing chemicals in Europe and North America are likely to restrain corrugated boards market over the projected period.
