Abstracts

The global Cosmetic Implants market was valued at 5962.2 Million USD in 2021 and will grow with a CAGR of 7.76% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Cosmetic implants are used to enhance the aesthetic looks of an individual and rectify the deformities caused due to accidents, trauma, and congenital disorders. Cosmetic implants have enabled convenient replacement of dysfunctional/missing body parts and it is easier for patients to regain previous loss in aesthetics, or enhance the same. Hence, the number of cosmetic implant procedures is on a continuous rise in the current scenario. The key drivers for the market growth are emerging minimally invasive reconstruction surgeries, technological advancements such as injectable fillers and gummy bear breast implants, rising number of congenital face disorders and tooth deformities, and increasing awareness about aesthetic appearance. However, high cost of treatment, low reimbursement rates, and risk of malfunctions are expected to hinder this growth.
