Creatine is a naturally-occurring amino acid (protein building block) that's found in meat and fish, and also made by the human body in the liver, kidneys, and pancreas. It is converted into creatine phosphate or phosphocreatine and stored in the muscles, where it is used for energy. During high-intensity, short-duration exercise, such as lifting weights or sprinting, phosphocreatine is converted into ATP, a major source of energy within the human body. In consumption market, the growth rate of global consumption is smooth relatively. USA, China and Europe are still the mainly consumption regions due to the advanced production technology and rapid development of economy. There are two major types of creatine, 80 mesh and 200 mesh. 200 mesh creatine is occupied the major market, with the production share of 61.82%. It can be widely used in many industries. Survey results showed that health care product is the major consumption of it with the market share is 66.12% in 2015. With the development of economy, these industries will need more creatine. So, creatine has a huge market potential in the future.
