Crude Tall Oil (CTO) is a by-product of the kraft pulping process used by many paper mills. Tall oil soap is collected at the mills and then acidulated to make crude tall oil. It is a mixture of fatty acids, rosin and Rubber neutral materials and forms water-in-oil emulsions and stabilizes mud systems at high bottom-hole temperatures. Crude oil and its derivatives play an important role in many situations. Huge downstream demand has driven the production of derivatives from crude oil called tall oil. The main sales markets are located in North America. After sweeping North America, the Asia-Pacific region and Europe also have strong purchasing markets. North America is the largest consumer of crude oil, accounting for nearly 40% of total revenue in 2019.
