Abstracts

The global Cryostat market was valued at 1875.38 Million USD in 2021 and will grow with a CAGR of 3.58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The healthcare industry contributes the maximum toward the cryostat market. Cryostats are used in various healthcare applications such as magnetic resonance imaging (MRI), frozen tissue sections, X-ray, spectroscopy, and other pathological experiments. MRI is one of the significant application areas of cryostats in the field of medicines. MRI applications held the largest share of the cryostat market in 2017 and are expected to exhibit the same trend in the coming years as well. Helium, as a cryogen, is extensively used in cryostats. Helium is highly essential for cooling cryogenic detectors and others in which long hold time, optical access, and easy access to the cold plate are required.
